German hackers have expressed their desire to fight against censorship on the [Internet](#) using their own communications satellites and ground stations, which are needed for tracking and communication with them. This decision came in response to yet adopted legislation, which (presumably) would limit the freedom of the Internet.

[According to](#) news agency BBC News, [plan](#) to deploy a satellite [network](#), the hacker was announced at a conference in Berlin Chaos Communication Congress, and is called the “global space network hackers.”

The activist movement hacker Nick Farr (Nick Farr) argues that knowledge transfer is the sole motive of this project. Farr and his colleagues are already working within the framework of [the project “Constellation”](#) , which is a platform that uses Internet-connected [computers](#) to do research in various aerospace related sciences.

According to most people to launch a satellite into space launch [vehicles](#) without impossible, but some enthusiasts in recent years managed to do it with balloons. However, without funding for the [national](#) agencies and large companies the task of tracking satellites launched is still elusive.

To better accommodate his companions, a German group of hackers come up with a technical solution reverse GPS, which is to create a network of ground stations tracking inexpensive. It is assumed that such stations will be able to accurately determine the coordinates of the satellites at any given time, thus improving the transfer of data from satellites to Earth.

Currently, legislation in space not ideal: on the one [hand](#), any country has the right to disable the satellite over its territory, but on the other hand almost no space is regulated by national [laws](#), and here in “space” Hackers

have room to maneuver in order to still reach their almost a fantastic project.

This idea of ??hackers to create their own satellite network is a response to the discussion in the U.S. anti-piracy law Stop Online Piracy Act (abbreviated as SOPA), which, according to most observers, greatly restricts the freedom of on-line. Experts believe that the bill threatens the SOPA constitutional rights of law-abiding citizens, because it is too tough measures to combat piracy on the Internet and designed by people who do not know the difference between DNS, IM and MP3.
